

NEED CEU'S?

Swanson Rink is happy to provide the following **AIA CES Registered** courses which have each been approved for 1.0 LU/HSW.

New Denver Code Presentation:

This learning session includes the most significant code changes related to the architectural design and fire safety for buildings, from the 2009 IBC to the 2015 IBC with the major changes of 2015 Denver amendments to 2011 Denver amendments. This learning session aims to highlight these major changes and their applications on different projects so that the participants can correctly apply these new requirements. The participants will understand the details of these major changes and be able to take advantage of the less stringent provisions and understand the implications of the more stringent requirements.

What you will learn:

1. The new occupancy classification changes using sample occupancies of commercial buildings and facilities.
2. The new fire protection system and means of egress changes.
3. The new provisions on unclosed vertical openings.
4. How to increase building height and areas.

International Existing Building Code Presentation:

This learning session consists of the explanation of how to correctly use and apply the 2015 International Existing Building Code (IEBC) with Denver amendments. The purpose of this learning session is to prepare the architects to the adoption of IEBC in the 2015 Denver Building Code. The participants will understand the difference between IEBC and Chapter 34 of 2011 Denver Building Code and will be able to use additional methods provided in IEBC in future projects in a more cost efficient way.

What you will learn:

1. The different compliance methods allowed in IEBC by comparing the differences between each method.
2. How to choose the compliance methods using sample project conditions.
3. The extent and implication of each by detailed explanations and illustrations of major IEBC provisions.
4. The Denver specified requirements for existing buildings in addition to IEBC.
